  HEALTH & VERDICT

  ------------------------------------------------------------
  Operational Health Score              100 / 100
    Scored gates                        11 green
    Gate coverage                       Evaluated: 11 / 11 gates
  Score model                           GREEN=100  AMBER=60  RED=0  |  GREY excluded

  Capital Readiness                     ALLOWED
  Failed gates                          None

    All critical gates passed. Capital deployment approved.

==========================================================================================
  1A  |  DECISION BRIEF
```

Decision Status	ALLOWED — review gate scorecard before deployment decisions.
Primary Constraint	No critical constraints identified.
Operational Signal	Core operations appear strong (EBITDA margin 41.9%, ROIC 497.8%), further verification required before capital commitment.
Data Reliability	Insufficient data to compute reliability score.

2 | CFO GATE SCORECARD

G	Assessment Area	Status	Sc	Key Insight
G1	Liquidity & Survival	[GREEN]	100	Base Runway Months ₹inf Cr | Monthly

3 | FINANCIAL PERFORMANCE

Metric	Value	Margin	Interpretation
Revenue	₹29.89 Cr		12-month LTM

Gross Profit	₹13.47 Cr	45.1%	Excellent
EBITDA	₹12.51 Cr	41.9%	Excellent
Net Profit	₹9.26 Cr	31.0%	Excellent
Operating Cash Flow	₹8.75 Cr		Operating cash generated
Free Cash Flow	₹8.51 Cr		

3A | TREND ANALYSIS

Linear regression over 12-month LTM — slope shows direction and rate of change

Metric	LTM Avg	Slope/Mo	Direction	Signal
Revenue	₹2.49 Cr	₹0.31 L	→ Stable	Neutral
Gross Margin	45.1%	-0.065pp	→ Stable	Neutral
EBITDA Margin	41.9%	-0.052pp	→ Stable	Neutral
Net Margin	31.0%	-0.039pp	→ Stable	Neutral
Debtor Days — Current (avg-AR method)	9d	ΔLTM +2d	↓ Declining	Watch
Note: avg-AR method = avg(AR) ÷ (Rev/365)				
Prior Year (same avg-AR method)	7d		↑ worsening — monitor collec	

⚠ Trend alerts: DSO worsening (7d→9d)

4 | CAPITAL & RETURNS

Metric	Value	Interpretation
ROIC (PE canonical)	497.8%	Excellent — see note below

⚠ ROIC NOTE: PE-canonical ROIC = NOPAT ÷ (Equity + Net Debt).

This company holds large net cash (₹18.57 Cr), which

deflates Invested Capital, producing a very high ROIC mathematically.

This does NOT imply operational inefficiency or a data error —
it reflects genuine capital-light operations + cash accumulation.
Use Operational ROIC above for peer benchmarking comparisons.

WACC	12.8%	Hurdle rate (company-configured)
ROIC - WACC Spread	485.0%	Value-creating — ROIC exceeds cost of capit
Return on Equity (ROE)	45.3%	Excellent
DSCR	62.49×	Adequate — above lender covenant
DSCR (EBITDA basis)	89.34×	Cross-check vs OCF-based above
Interest Coverage (EBIT)	309.7×	Strong coverage
Net Cash	₹18.57 Cr	Cash surplus — no net debt

5 | WORKING CAPITAL

Metric	Value	Benchmark	Interpretation
Debtor Days (DSO)	9d	typical 35–60d	Excellent
Stock Days (DIO)	21d	typical 30–60d	Lean inventory
Creditor Days (DPO)	24d	typical 60–90d	Healthy
Cash Conversion Cycle (CCC)	7d	typical 30–60d	Excellent
Operating NWC (AR + Inv − AP)	₹77.01 L		Asset-light

↳ Total NWC (all current A/L): ₹1

5A | MARGIN DRIVER DECOMPOSITION

YoY variance analysis — current LTM vs prior LTM

Driver	Impact	Interpretation
Revenue growth YoY	(₹8.45 L)	-0.3% vs prior year
Volume effect on GP	(₹3.81 L)	Incremental GP at prior margin (45.1
COGS inflation drag	(₹44.6K)	Extra cost vs prior-year cost rate —
Gross profit change (net)	(₹4.26 L)	Current GM 45.1% vs prior 45.1%
OpEx change	(₹49.4K)	OpEx increased (95.4L -> 95.9L)
EBITDA change (net)	(₹4.75 L)	Volume + margin + opex combined

6 | STRATEGIC INTELLIGENCE

Metric	Result	Interpretation
Revenue Quality Index (RQI)	1.00 / 1.00	High quality
Revenue Volatility (CV)	0.02	Stable (Coefficient of Variation)
Operating Leverage (DOL)	1.5×	Low fixed cost exposure (Degree of Oper
Safety Margin	51.2%	Well above break-even
Incremental ROIC	-0.3%	Value-dilutive
Incremental Margin (dEBITDA/dRev)	56.2%	Excellent
Customer Concentration (Top 3)	31.1%	Acceptable — diversified
Accounting Integrity Score (AIS)	100 / 100	RELIABLE

Formula: AIS = GL(25) + Recon(25) + Completeness(25) + Temporal(25)

GL balance integrity (debit=credit)	25 / 25	PERFECT
Three-way reconciliation (GL/BS/subledger)	25 / 25	ALL_PASS

```
  Data completeness (critical files)                    25 / 25   COMPLETE
  Temporal consistency (spikes/gaps/flat-lines)         25 / 25   CLEAN

Summary: 12 High confidence | 0 Indicative | 0 Low / Blocked

10B | RISK SEVERITY RANKING

Risks scored by: Impact (financial exposure) × Likelihood (data evidence).

#	Risk	Imp	Lkl	Score	Severity
1	High customer concentration Top customer 31.1% of revenue	4	3	12	🟠 High

Score = Impact × Likelihood (max 25). 25=Critical, 15–24=High, 6–14=Medium, 1–5=Low.

10C | CASH SENSITIVITY RANKING

⚠ OCF is blocked — figures show estimated economic impact, not actual cash flow.

WC items = balance sheet / working capital release. P&L items = estimated EBITDA impact.

WORKING CAPITAL IMPACT (balance sheet / WC release)

#	Scenario	WC Impact	Direction	Action type
1	Inventory build +60 days	₹2.70 Cr	▼ Cash consumed	Operationa
2	Improve DSO by 30 days	₹2.46 Cr	▲ Cash release	Management
3	Extend DPO by 30 days	₹1.35 Cr	▲ Cash release	Negotiatio
4	Improve DSO by 15 days	₹1.23 Cr	▲ Cash release	Management
5	Inventory write-down 10%	₹12.34 L	▼ Cash consumed	Balance sh

P&L IMPACT (revenue / cost shocks → EBITDA / net profit)

#	Scenario	P&L Impact	Direction	Action type
1	Revenue shock -40%	₹5.39 Cr	▼ Margin compress	Tail ris
2	COGS inflation +20%	₹3.28 Cr	▼ Margin compress	Cost ris
3	Revenue shock -20%	₹2.69 Cr	▼ Margin compress	Market :
4	COGS inflation +10%	₹1.64 Cr	▼ Margin compress	Cost ris

Note: WC and P&L impacts operate via different mechanisms — do not rank across tables.

10D | EARLY WARNING SIGNALS

Monitors metrics approaching gate failure thresholds before they breach.

Signal	Current	Threshold	Proximity	Status
DSO vs collection threshold	9d	90d	9.9%	🟢 Safe
DPO vs vendor risk threshold	24d	120d	19.7%	🟢 Safe
Interest coverage (EBIT) vs covenant floor	309.7×	2.5×	0.8%	🟢 Sa
Revenue CV vs volatility limit	0.022	0.10	22.1%	🟢 Safe
ROIC vs WACC spread	+485.0pp	+5pp buffer	100.0%	🟢 Safe
Budget attainment vs floor	103.0%	95%	100.0%	🟢 Safe

All monitored metrics within safe operating bands.

10E | METRIC DEPENDENCY TREE

Shows cause propagation from root failures to blocked metrics.
Fixing root causes unlocks downstream metrics.

================================================================================
  13  |  WORKING CAPITAL FUNDING STRUCTURE

--------------------------------------------------------------------------------

  Shows where capital is tied up or funded across the working capital cycle.
  ⚠ OCF is blocked — amounts below are balance-sheet estimates, not verified cash flows.

  Component                              Cash Amount      Days  Interpretation
  -------------------------------------  --------------  --------  -------------------------
  AR — capital tied in receivables            ₹87.86 L        9d  Acceptable
```

```
  Inventory — capital tied in stock          ₹1.23 Cr       21d  Monitor

  AP — supplier-funded capital (credit)  (₹1.34 Cr)                  24d  Extended payment

  -----------------------------------  --------------  --------
  Net Operating Working Capital              ₹77.01 L        7d  Company-funded cycle
```

Note: Operating NWC = AR + Inv − AP. Invested Capital = Equity + Net Debt (see Section 4

Note: Operating NWC differs from Total Net Working Capital (Balance Sheet: CA − CL, shown

Working Capital Intensity: 9 days of revenue
Formula: Operating NWC ÷ (Revenue ÷ 365) = ₹77.01 L ÷ ₹8.19 L per day

Interpretation: company ties up 9 day(s) of revenue in net operating working capital.

==========

14 | REVENUE QUALITY DIAGNOSTICS

Breaks down the Revenue Quality Index (1.00) into its drivers.

Driver	Score	Weight	Signal	Detail
Collection reliability	1.00	35%	✓ EXCELLENT (≤30d)	DSO 9d — fast
Customer concentration	1.00	40%	✓ DIVERSIFIED (HHI<0.10)	HHI 0.099, top
Contract / repeat revenue	1.00	25%	✓ HIGH (≥70% recurring)	100% recurring,

Composite RQI: 1.00 / 1.00 — HIGH QUALITY
Improvement lever: collection speed (DSO) has highest weight (35%) and lowest score — pri

==========

15 | SCENARIO PROBABILITY LAYER

Risk likelihood assessed from observable data signals — not statistical probability.
(CV and DSO data do not imply tail probabilities without a distributional assumption.)

Scenario	Risk Signal	Impact if occurs	Evidence basi
COGS inflation +10%	🟡 Watch	₹1.64 Cr	Manufacturin
Inventory build +60d	🟡 Watch	₹2.70 Cr	Procurement/
AR collection miss (30d)	🟢 Low	₹2.46 Cr	AR recon gap
Revenue -20% shock	🟢 Low hist. vol.	₹2.69 Cr	CV 0.022 — l
Revenue -40% shock	🟢 Low	₹5.39 Cr	Tail scenari

Note: 'Risk Signal' is observation-based, not a statistical probability estimate.

==========

16 | PORTFOLIO BENCHMARK

Comparison vs industry distribution — shows where this company stands within its peer group across quartiles.

Benchmark comparison unavailable due to internal validation issue

17 | COHORT PERFORMANCE TRACKING

Year-over-year performance trajectory — shows whether the company is improving, stable, or deteriorating over time.

FY	Revenue	GM%	EBITDA%	NM%	ROIC	YoY Signal
FY2025	29.97Cr	45.1%	41.9%	31.0%	80.9%	
FY2026	29.89Cr	45.1%	41.9%	31.0%	497.8%	Rev -0.3%

Trajectory: Revenue -0.3% | GM -0.0pp | EBITDA margin -0.0pp

18 | MANAGEMENT EXECUTION SCORE

Evaluates management execution across five dimensions.
Based on verifiable financial signals — not qualitative assessment.

Dimension	Score	Signal	Evidence
Budget discipline	★★★★☆	Strong	Avg revenue var 3.0% over 12 mo
P&L forecast accuracy	★★★★☆	Strong	Avg NP variance 8.0% monthly
Working capital control	★★★★★	Strong	DSO 9d vs target 45d
Cost control	★★★☆☆	Moderate	COGS% chg +0.0pp YoY; OpEx grew
Revenue predictability	★★★★★	Strong	CV 0.022 across 12 months

Overall execution: Strong (21/25)
Data reliability: 100/100 (AIS) — scores above are based on reconciled data.

19 | LIQUIDITY TIMELINE SIMULATION

Projects cash balance across 12 months under base, upside, and stress scenarios.
Based on current cash (₹18.77 Cr) + monthly OCF.

Month	Base Case	Stress (-20% Rev)	Upside (+10% OCF)
Month 1	₹19.50 Cr	₹19.33 Cr	₹19.57 Cr
Month 3	₹20.96 Cr	₹20.45 Cr	₹21.18 Cr

Month 6	₹23.15 Cr	₹22.14 Cr	₹23.58 Cr
Month 9	₹25.33 Cr	₹23.82 Cr	₹25.99 Cr
Month 12	₹27.52 Cr	₹25.50 Cr	₹28.39 Cr

All scenarios maintain positive cash balance over 12 months.
Assumption: monthly OCF from CF statement, stress applies revenue shock to gross margin.

==========

20 | DECISION RECOMMENDATION ENGINE

Algorithmic recommendations derived from financial signals.
Ranked by urgency and financial impact.

1. 🟢 [OPPORTUNITY] Capital is generating strong returns — consider expansion
   ROIC 497.8% = 39.0× WACC — reinvestment is value-accretive

					└ Better da

PLAYBOOK SUMMARY

Operational levers (combined)	+₹	32.80 Cr EV	(revenue, margin, WC)
Financial levers (combined)	+₹	0.11 Cr EV	(debt, WC release)
Multiple re-rating	+₹	6.25 Cr EV	(data quality + market)
Total value creation potential	+₹	39.16 Cr EV	(if all levers executed)
Current EV	₹	87.55 Cr	
Potential EV (all levers)	₹	126.71 Cr	(45% uplift)

⚠ Double-count note: Revenue growth and margin expansion are NOT independent.

Combined EBITDA impact (rev+15%, margin+2pp simultaneously):
EBITDA: ₹34.37 Cr × 43.9% − ₹29.89 Cr × 41.9% = ₹2.56 Cr

```
Combined EV impact: +₹17.94 Cr  (vs sum of separate impacts — use combined for binding

Priority sequence: Operational levers first (lower risk, faster payoff)
→ Fix data (OCF unlock) → Collect AR → Expand margin → Manage debt

Valuation model: EV = ΔEBITDA × 7.0x (source: default_fallback) — held constant across al
Sensitivity: If multiple re-rates to 7.5x, all operational EV impacts increase by ~7%.
Multiple sensitivity is NOT modelled per lever — see Block C for dedicated multiple expan
This model assumes 100% of incremental EBITDA is valued at the entry multiple.
PE models often apply a discount (70–90%) for execution risk on incremental EBITDA.
⚠ All EV impacts are directional — do not use for binding valuation without verified OCF.
```
